

The Blue Equilibrium Lab left you with an extra hour in your day! So what is there to say about writing this one up?

1. Always double check the rubric and use it as a checklist.

Section 1 of Part A.

It is especially important to take good notes during the pre-lab lecture – especially when we use a modified procedure.

Section 2 of Part A:

Absorbance has no units

pH has no units, but was given to you to the hundredths place

Section 3 of Part A:

Converting pH into $[H_3O^+]$ is done with the formula $[H_3O^+] = 10^{-pH}$

2. What you include in your notebook? Well since you can always state, "We followed the procedure as provided in the laboratory manual," one obvious thing to include in your lab notebook is, "with the following exceptions: (and then list them)".
