Instructions: Show all work whenever a calculation is required! You will receive credit for how you worked each problem as well as for the correct answer. If you need more space, you may use the back of your periodic table — Write: "See PT" in box and then attach the periodic table. **BOX YOUR ANSWERS!** Write legibly.

1. (4 pts) Balance the following reaction.

2. (4 pts) Write and balance the reaction: Barium bromide and sodium sulfate produce barium sulfate and sodium bromide.

3. (4 pts) Use Avogadro's number to calculate how many hydrogen atoms are in 0.40 mol $(\text{NH}_4)_2\text{Cr}_2\text{O}_7$. Start with "n =" [N = 6.02×10^{23}]

4. Use the following balanced reaction to answer Questions 4a – 4d:

4a. (4 pts) How many moles of $\text{F}_2(\text{g})$ are needed to react with 175 g Xe(g) ?

4b (5 pts) Suppose 200.0 g of $\text{F}_2(\text{g})$ is reacted with excess Xe(g) . What is the theoretical yield (in grams) of XeF_6 ?

4c (4 pts) Suppose 70.0 g Xe(g) + 58.0 g $\text{F}_2(\text{g})$ were allowed to react. Which is the limiting reagent?

4d. (5 pts) Continuing with the quantities used in 4c, how many moles of the excess reagent are left over?

5. (4 pts) Suppose a reaction was performed with a theoretical yield of 0.20 mol $\text{Ca}_3(\text{PO}_4)_2$ (MM = 310 g/mol). If the experimental yield turned out to be 57 g, what is the percent yield?

6. (4 pts) How many millimoles of copper(II) chloride are in a 75.0 mL sample of 0.1187 M $\text{CuCl}_2(\text{aq})$?

7. (5 pts) What is the formula of a compound known to contain only arsenic and sulfur and analyzes for 48.31% As?

8. (6 pts) Which of the following salts are soluble in water? Circle all that are.

BaCl_2 $\text{Na}_2\text{Cr}_2\text{O}_7$ BaSO_4
 CaS FeSO_4 $\text{Ni}(\text{OH})_2$

9. (3 pts) Will a precipitate form if the following solutions are mixed?

Yes No $\text{Ca}(\text{NO}_3)_2(\text{aq})$ and $\text{Na}_2\text{CO}_3(\text{aq})$

Yes No $\text{AgNO}_3(\text{aq})$ and $\text{KBr}(\text{aq})$

Yes No $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2(\text{aq})$ and $\text{NaClO}_4(\text{aq})$
